

MAURER® Mechanical Safety Device

The highest standards of safety made easy: The MAURER® Mechanical Safety Device

Our newly developed mechanical locking solution offers the highest levels of safety and protects your production process from faults and the resulting costly damage, such as product loss or shutdowns.

The MAURER® Mechanical Safety Device is fitted after the blind plug or a retractable assembly on the safety Ingold socket and prevents the union nut from accidentally coming loose or twisting. The safety device still has its protective effect even if the union nut has not been correctly tightened, for example as a result of errors made during the assembly procedure or vibration in the production process. This is because the adapter cannot loosen any further.

A simple solution with a considerable increase in safety:

- Quick and easy assembly
- Significant and cost-effective increase in production safety
- Developed for use with the quick replaceable MAURER® Safety Ingold Socket
